

ALPHA SERIES

LPW Liquid Cooled Engines

LPW2 | LPW3 | LPW4 | LPWT4

LPW4 Engine

OVERVIEW

The Alpha engine is specifically designed as an Industrial/Pump spec engine suitable for use in unregulated emissions territories. It is durable, reliable and easy to maintain with oil & filter changes up to 500 hours, dependant on operational conditions. It is designed for continuous operation in ambient temperatures up to 52°C (122°F) and a cold start capability down to -32°C (-25.6°F).

Note:

This engine does not comply with Harmonised International Regulated Emissions Limits.

BASIC ENGINE CHARACTERISTICS

- diesel fuelled and approved for operation on biodiesel, that conforms with ASTM D6751 and EN14214, concentrations of up to 20%
- * Optional items

1500 - 3600 r/min variable speed | full-load speed range 1500 - 3000 r/min

fixed speed | full-load speed range

6.8 - 37.5 kW | 9.1 - 50.3 bhp¹

- direct fuel injection
- 2, 3 or 4 cylinders
- liquid cooled
- naturally aspirated or turbocharged (LPWT4)

DESIGN FEATURES AND EQUIPMENT

- inlet and exhaust manifolds *
- heavy duty air cleaner *
- fuel lift pump
- mechanical governing
- self-vent fuel system with individual
- fuel injection pumps
- fuel filter/agglomerator
- thermostatically controlled cooling system with belt driven coolant pump
- radiator with fan and belt guard *
- gear driven positive displacement type
- lubricating oil pump
- spin on full flow lubricating oil filter
- flywheel with ring gear *
- SAE 5 flywheel housing *
- 12V starter motor *
- 12V battery charge alternator *
- oil pressure and coolant temperature switches *
- fuel control solenoid (energised to run) *
- skid base packing
- operators handbook (English) *

OPTIONAL ITEMS

- radiator options with choice of pusher or puller fan and full guarding
- increased oil sump capacity (deep sump)

RATING DEFINITIONS TO ISO 3046

ISO Standard Conditions

Barometric pressure 100 kPa Relative humidity 30% Ambient air temperature at the inlet manifold 25°C

Fixed Speed: Continuous Power (ICN)

The power in kW which the engine is capable of delivering continuously at the stated crankshaft speed, under ISO 3046 standard conditions, measured at the flywheel without power-absorbing accessories, provided that the engine is overhauled and maintained in good operating condition and that fuel to BS EN 590 Class A1 or A2, and lubricating oils to the correct performance specification and viscosity classification as recommended by Lister Petter Limited are used.

Fixed Speed (Fuel Stop): Overload Power (ICXN)

The maximum power in kW which the engine is capable of delivering intermittently at the stated crankshaft speed for a period not exceeding one hour in any period of twelve hours of continuous running, immediately after working at the continuous power, under ISO 3046 standard conditions and with the provisions specified for continuous power in item (1) above, but with the fuel limited so that the fuel stop power cannot be exceeded.

Variable Speed (Fuel Stop): Continuous Power (IFN)

The maximum power in kW which the engine is capable of delivering continuously at the stated crankshaft speed, under ISO 3046 standard conditions, and with the provisions specified in item (1) above, but with the fuel limited so that the fuel stop power cannot be exceeded.

Variable Speed (Fuel Stop): Overload Power (IOFN)

The maximum power in kW which the engine is capable of delivering intermittently at the stated crankshaft speed for a period not exceeding one hour in any period of twelve hours of continuous running, immediately after working at the continuous power, under ISO 3046 standard conditions and with the provisions specified for continuous power in item (3) above, but with the fuel limited so that the fuel stop power cannot be exceeded.

Derating

For non-standard site conditions, reference should be made to relevant BS, ISO & DIN standards.

Notes:

- 1. Power ratings measured at the flywheel and fuel consumptions apply to a fully run-in, non derated engine without a radiator and fan fitted, and without power absorbing accessories or transmission equipment.
- 2. The overload capability applies to a fully run-in engine. This is normally attained after a running period of about 50 hours.
- 3. Excluding radiator.

Note

Engines operating at 3600rpm are offered for standby duty only. For further information and approval please contact Applications Department.
